SureShot™ MWD System

DrilPro's SureShot family of directional and directional plus gamma systems provides reliable and flexible measurement-while-drilling performance in combination with our second-generation Rotary Pulser. The system can be powered by our battery modules, our turbine alternator, or a combination of the two. This MWD system provides highly accurate azimuth and inclination data for all applications from straight-hole through horizontal drilling. Rapid and accurate toolface transmission enables the most complex well paths to be drilled with confidence.

SureShot's downhole portion includes a rugged directional sensor package with NIST-traceable magnetometer calibration; a reliable, field-proven, Rotary Pulser*; and battery and/or turbine alternator for power. SureShot's modular design allows the addition of other functions like high-quality gamma and/or vibration logging. Each package is protected by a state-of-the-art vibration isolation system and is mounted in beryllium copper or high-strength steel pressure barrels. A small, robust surface decoder interfaces with a computer running DrilPro's SureShot Control Center software. The SureShot MWD can store up to 32 MB of MWD/LWD and diagnostic data for retrieval during trips.

SureShot's patented second-generation Rotary Pulser* is the toughest, most advanced, most LCM-tolerant mud pulse transmitter in the industry. Our pulser's ultra-reliable, high-efficiency DC brushless motor and controller, single open-flow path, positive pulse output and anti-jamming control virtually eliminates jamming or blockage, and the on-board memory allows post-run analysis of pulser performance. The Rotary Pulser is easily converted between fixed-mount and retrievable configurations.

The SureShot system is easy to learn, assemble and operate. In fact, APS's customers frequently train their personnel themselves to operate our system.

- > The highly reliable second-generation Rotary Pulser converts easily from fixed-mount to retrievable, providing fixed-mount reliability or retrievable lost-in-hole security.
- > Additional sensors including gamma, vibration monitoring and resistivity can be quickly incorporated into our "LWD-Ready" system.
- > The surface system presents data in a simple, user-friendly control and display module. The data is transferred to a central control PC from which it can be directed back to a dedicated wireless rig-floor display and/or rig monitoring system.
- > Multiple encoding schemes and advanced decoding enable rapid customization of the data stream for maximum speed or maximum data integrity.
- > The unique power management module enables the system to be powered through dual battery packs or a combination of battery power and turbine alternator †.

Operating Specifications		
Inclination Range	0° - 180°	
Inclination Accuracy	± 0.1°	
Azimuth Range	0° - 360°	
Azimuth Accuracy	± 1.0° (Inc > 10°, Dip < 70°)	
Tool Face (Gravity)	± 1.0° (Inc > 10°)	
Tool Face (Magnetic)	± 2.25° (Dip < 70°)	
Gamma (Optional)	API-calibrated 0 - 800 API ±5% to 300°F (150°C) ±10% to 350°F (175°C) (based on typical API scale factor of 1.35 API counts/sec)	
Sensors		
Directional	Tri-axial fluxgate magnetometer with NIST-traceable calibration; quartz accelerometer	
Gamma (Optional)	Scintillator/PMT unit	
Product Specifications		
Signal Transmission	Positive mud pulse	
Pulse Height	Adjustable	
Retrievable/Reseatable	Available	
Fixed-mount	Available	
Activation	Electromechanical	
Operating Voltage	28 - 40 VDC
